ID fob use

- Each vehicle must have an ID fob that corresponds to its registration number. This allows the driver to log on to the system. Drivers must only use id fobs issued to their company and with the correct vehicle registration.
- If a driver forgets their ID fob, has the wrong one, or an error occurs, they must report this to the Organic Waste team immediately who will ensure the correct details are recorded.
- During discharge the system measures the flow and solid content of the waste. This information is used to determine the cost of treatment of domestic waste within the tiered pricing structure and therefore it is important that drivers do not allow others to use their ID fob as the data recorded by the systems is used for invoicing.
- Where applicable, charges for vehicle ID fobs will be listed in your next transaction summary.
- All vehicle ID fobs remain the property of GENeco Limited. Deliveries accepted using the ID fob system are subject to the terms and conditions of the Permit to discharge issued to your company.
